Tracking
Tracking refers to an optically consistent degree of increase (or sometimes decrease) of space between letters to affect visual density in a line or block of text.

Kern = Kerning:
The spacing between letters or characters in a piece of text to be printed.

pt = Point
The point is the smallest unit of measure. It is used for measuring font size, leading, and other items on a printed page.

Headlines are Avenir Next Bold. Centered or Left aligned, kern 10

How to calculate the line spacing for your body text

Font size x 1.5 = linespacing

Example: Font size is 20pts. 150% of 20 or 20 x 1.5 = 30 (pts)

Line Detail

Use

The line detail can be used to separate text or add a small visual element to a page.
You can see examples of use throughout this folder.

(See examples below)

Line Settings

To make the lines in InDesign or other Adobe programmes use the stroke panel and select 'Straight Hash'.

We recommend using 3pt for most applications. However, the weight and length of the line will differ for each application.
