SEGMENTATION GUIDELINES

- Category

(Life Stage)
- Subcategory

(Primary selling attribute)

Hatchery	Starter / Fresh Water	Grower / Sea Water
Feed used in the initial life stage of fish and shrimp, including broodstock management, egg incubation, and early larval development. Pellet size up to mm + Broodstock feed	Support the transition from yolk sac fry to exogenous feeding with highly digestible nutrients. Pellet size between 1,1 – 4 mm	Balance performance, health, and environmental impact throughout the grow-out phase in sea water. Pellet size above 4,1 mm
	Standard Performance Provides essential nutrients for consistent growth and development. <i>E.g. Classic Marine, EXIA Perform</i>	Standard Performance Provides essential nutrients for consistent growth and development. <i>E.g. Ocean King, Lumpfish Grower, Energy X, Superba, EFICO range – 20xx, Alpha 714 – 718, YS 885 – 888</i>
	High Performance Promotes faster growth and improved feed efficiency. <i>E.g. CPK, Golden Optima (above 1mm), Tri-X, EXIA Prime, INICIO range - 702, 917, 918, Akai, Forte, INICIO Plus range – 401, 874, MT</i>	High Performance Promotes faster growth and improved feed efficiency. <i>E.g. Power range; EFICO range – Zeta, 21xx – 90xx, Alpha 756 – 792, Sigma 411 – 860, YS 891 – 898</i>
	Top Performance Maximizes growth rates and minimizes feed waste. <i>E.g. DAN-EX, LARVIVA Nursery, EXIA Maxio, Golden range, INICIO range – Akai, Plus, Plus S, Rainbow, Tri Plus</i>	Top performance Maximizes growth rates and minimizes feed waste. <i>E.g. DAN-EX, EXIA Perform, EXIA Maxio, New Power Akai, Power Extreme, EFICO range – Enviro, Sigma 870 – 980</i>
Broodstock Optimizes reproductive health and egg quality. <i>E.g. Golden Reprodutor, Elico Genio, LARVIVA Broodstock, Symbio Broodstock</i>		
Live feed Supports the development of fish fry with natural ingredients such as rotifers and artemia. <i>E.g. LARVIVA Multigain</i>		
Larvae Supports the growth and development of shrimp larvae. <i>E.g. LARVIVA Mysis, LARVIVA Zoea</i>		
Larvae & Weaning Facilitates the transition from live feed to formulated diets. <i>E.g. LARVIVA ProStart, LARVIVA ProWear</i>		
Post larvae Promotes rapid growth and development of shrimp in post-larval stages. <i>E.g. LARVIVA PL</i>		
Nursery Develops and strengthens fish fry to enter the next phase. <i>E.g. INICIO Plus G, INICIO Plus M, Symbio Plus</i>		
		Booster Supplements diets for enhanced growth and pigmentation. <i>E.g. EXIA Maxio Boost</i>
		Finisher Optimizes final growth and product quality. <i>E.g. EXIA MAXIO Finisher, Finesta</i>
RAS Tailored for recirculating aquaculture systems during the hatchery phase. <i>E.g. LARVIVA ORBIT</i>	RAS Specifically designed for recirculating aquaculture systems. <i>E.g. LARVIVA ORBIT, ORBIT, ORBIT CPK</i>	RAS Specifically designed for recirculating aquaculture systems. <i>E.g. ORBIT range, King, Sirle, NEW ORBIT</i>
	Smoltification Facilitates the transition from freshwater to saltwater. <i>E.g. Intro Tuning</i>	
		Sustainability Promotes sustainable aquaculture practices. <i>E.g. Blue IMPACT, Salvia</i>
		Organic Feed formulated to meet specific organic regulations regarding raw ingredients. <i>E.g. EcoLife Pearl</i>
Health Enhances shrimp and fish health and disease resistance with probiotics or immunostimulants. <i>E.g. SmartCare packages – EFICO Genio RX, Golden Reproduction Qardio</i>	Health Enhances shrimp and fish health and disease resistance with probiotics or immunostimulants. <i>E.g. SmartCare range and packages – Intro, Qardio, Focus, Forte, EXIA Plus, INICIO Focus, LARVIVA ProNurse</i>	Health Enhances shrimp and fish health and disease resistance with probiotics or immunostimulants. <i>E.g. SmartCare range and packages – Assist Skin, Calm, Resist, Qardio, Quick M, Quinnat, Forte, Focus, Total Care</i>
Bio-Remediation Improves water quality and reduces pollution. <i>E.g. SmartCare Balance H</i>		Bio-Remediation Improves water quality and reduces pollution. <i>E.g. SmartCare Balance P</i>
Medicated Treats specific health issues under veterinary guidance. <i>E.g. AquaVet FF, AquaVet OXI</i>	Medicated Treats specific health issues under veterinary guidance. <i>E.g. AquaBase, AquaVet range – FF, OA, OXI</i>	Medicated Treats specific health issues under veterinary guidance. <i>E.g. AquaBase, AquaVet range – FF, OA, Slice, MediBase, VetCare range – U, X, Plus</i>

Needbased Customer Segmentation

Clustering our customers based on their key business drivers

Customer segmentation is a new concept for BioMar, with needs-based segmentation creating the foundation for further evolution

Projection of BioMar's customer segmentation journey

We identified 4 clusters

Based on qualitative patterns from **23** in-depth interviews, **we identified distinct customer segments defined by their needs, challenges, and motivations.**

Each segment reflects a common set of priorities and pain points, which can guide tailored strategies

x:

Innovation & Risk Appetite

- **Conservative:** Prefers proven, stable methods and incremental improvements.
- **Progressive:** Open to testing new technologies, innovative approaches, and riskier bets.

y:

Business Mindset

- **Market Differentiation:** Seeks to stand out in the market, whether through branding, sustainability, premium products, or unique farming techniques.
- **Operational Efficiency:** Focuses on optimising processes, maximising yield, and ensuring consistency.

Who is who?

Future Shapers In a nutshell

7 TOTAL
ROLE: CEO 5, Technical manager 1, Owner 1
Species: FF 1, SW 2, FW 4
Markets: France 4, Spain 1, Portugal 1, Italy 1
Size: Medium 5, Small 2

Consideration drivers

Future Shapers

Ambitious innovators that use differentiation as a competitive edge.

They see themselves as pioneers, believing in the future even when it means stepping out of their comfort zone. This mindset has shaped their journey in aquaculture. In general, they have a **genuine passion for fish farming** and **strong ambitions to grow**. Over time, they expanded by acquiring larger sites or increasing production. Throughout their career, they faced many challenges but saw them as chances to innovate. Their goal is not just to grow the business but to **stand out in the market**.

Professional Challenges and Satisfaction

Their biggest challenges include **keeping teams ahead** and **motivated**, following **strict regulations** and making sure their farms stay **environmentally responsible**.

What brings them most **satisfaction** is finding an edge that allow their operations to grow, increasing production, **getting PGI certification** and seeing their **product recognised**, especially when praised by top chefs or clients.

Key words

VISIONARY

PIONEERING MINDSET

FORWARD-THINKER

Tips for beginners

Have patience, determination, **passion** and an entrepreneurial spirit.

Attitudinal level

Level of tech

Innovation driven

Risk averse vs experiment

Research, data and analytics

Stance of sustainability:

Vision on market future

They see a **market led by big companies** and **more demanding consumers**, especially about sustainability and transparency.

They believe future success depends on **balancing innovation, efficiency** with **what people want**: convenient products at a fair price.

Food accounts for a significant share of production costs, making it a strategic lever for the entire sector. This also places responsibility on suppliers to innovate and adapt their products, supporting the industry’s shift toward more sustainable and efficient practices..

CEO- FW

Company Objectives: Top 5

They focus on growing their farms and modernising processes to stay competitive and future-ready. Innovation enables them to adapt quickly and improve operations, while sustainability and climate resilience are seen as essential to long-term market success.

How feed supports business goals

- **Product differentiation:** Custom feed helps create unique, high-quality fish that stand out in the market.
- **Scalable growth:** Reliable supply and performance are key to growing production.
- **Better performance:** Feed boosts fish health and growth efficiency.
- **Sustainability:** Feed must align with long term environmental goals.
- **Strategic partnership:** They want proactive, innovative suppliers who help them grow.

What they need from a supplier to achieve their current goals

Future Shapers

When a supplier combines efficiency, reliability and courtesy, it becomes a true strategic partner, facilitating collaboration and contributing to the success of the company.

CEO- FW

The ideal feed supplier

Brand awareness

Brands in their radar

“BioMar means history, innovation, sustainability and the presence of a strong sales and technical team that works closely with us.”

CEO- FW

BioMar: the benchmark brand

The ideal feed supplier vs today's partners in a scale of 1 to 10

*Figures based on available responses (5 out of 7 interviews)

BioMar stands out as the supplier that best matches what Future Shapers look for, especially in innovation, feed quality and technical outcomes.

Skretting follows closely, showing strong performance in logistics but still lags behind in innovation, technical outcomes and flexibility.

Le Gouessant is valued for its adaptability and technical results but lags behind in innovation and logistics.

This comparison highlights where each brand meets or misses expectations.

BioMar

- **Future Shapers are ambitious by nature.** They aim to grow, lead, and bring premium, well differentiated products to the market. **To succeed, they need feed suppliers who can truly partner with them,** not only delivering performance but also co-creating tailored solutions that match their pace of innovation.
- They value technical excellence, **flexible collaboration** and **strong responsiveness.** Gaps in innovation, technical expertise or supply reliability push them to look elsewhere.
- This segment needs **partners who move as fast as they do:**
 - proactive
 - forward-looking
 - and ready to support both their day to day and long term vision.

Pain Points	Tension	Needs
Loss of technical expertise that once supported fish farming practices.	<i>"Still in contact with BioMar but something important is missing without that expert."</i>	Specialised technical knowledge to improve farming methods. More relevant for smaller producers in France
Limited access to shared knowledge and market information within the aquaculture sector.	<i>"Fish farmers need to be informed about market developments and practices to better anticipate challenges and opportunities."</i>	Regular access to trends and insights from suppliers who are well connected, to support strategic decision making.
Lack of innovation and custom development from current main feed suppliers, especially for flat fish species.	<i>"We will keep moving forward. If we need to work with a smaller but more flexible supplier who develops what we want, we will."</i>	More flexible, innovative suppliers who can co-develop tailored feed improvements for FF species.
Delayed communication or response times due to BioMar's geographic distance from fish farms.	<i>"The relationship with BioMar is good... the only weakness is its distance from Italy."</i>	Closer local presence or faster communication channels to ensure timely support and interventions.
Difficulty conducting feed trials due to lack of small production volumes.	<i>"It's true that small volumes are a barrier. I understand why it's a problem for them but it's also a problem for us."</i>	More flexible batch sizes or alternative solutions to enable feed testing in smaller farms.
Lack of consistent responsiveness from other feed suppliers, who stopped delivering feed to their facility.	<i>"If tomorrow BioMar responds less to our requests, we'll look elsewhere and if others respond better, we'll redistribute our orders."</i>	Reliable and consistent support to ensure continuity and avoid previous supply issues.

Scalable Performers

Operational minds that push for volume, efficiency and reliable results.

They see themselves as leaders in their species and in the aquaculture sector. Their goal is clear: to grow. Whether due to their background or their farm's current situation, they **focus on scaling up**, with strong plans to double capacity and move to the next level. **Growth has become a mantra**, enabled by the partnerships and technological investments. When facing challenges, they respond with an operational mindset, improving processes and raising the farm to a higher standard.

Scalable Performers In a nutshell

5 TOTAL
ROLE: CEO 2, Technical manager 2, Owner 1
Species: FF 2, SW 2, FW 1
Markets: Spain 3, Portugal 1, Italy 1
Size: Big 1, Medium 4

Professional Challenges and Satisfaction

The main **challenge** is to make sure their growth plans **move forward at every level**, while keeping quality standards and **costs under control**.

What brings the most **satisfaction** is working in alignment with their feed suppliers, who **support this growth strategy** while also delivering a quality product in terms of performance, growth, and robustness.

Key words

VISIONARY

FORCE FOR CHANGE

EXPANSION

HIGH-EXPECTATION

PRAGMATIC

Tips for beginners

Have patience, a positive attitude, and **stay focused** on long-term growth.

Consideration drivers

Attitudinal level

Research, data and analytics

Stance of sustainability:

Vision on market future

They view the future of aquaculture as an **opportunity to grow while safeguarding the industry's image**, which they see as essential to their long-term success.

Advances in genetic selection and feed improvements are expected to deliver faster-growing, more robust fish. These advances will help support their expansion plans and improve production results.

Solid Executors In a nutshell

6 TOTAL
ROLE: CEO 3, Technical manager 1, Owner 2
Species: SW 5, FW 1
Markets: France 1, Portugal 1, Italy 1, Croatia 1, Tunisia 2
Size: Big 1, Medium 5

Consideration drivers

Solid Executors

Reliable producers focused on stability, consistency and doing what works.

They see themselves as performers who get things done. Most come from saltwater farming, where competition is strong and prices are low. This has shaped a mindset focused on stability, cost control and operational discipline. They pay close attention to how global changes affect production costs and market prices. In recent years, many have had to act just to keep the business running and protect cash flow. Still, they stay committed to what they know works.

Professional Challenges and Satisfaction

Their **challenge** is to **stay profitable while managing the threats**: rising costs, temperature changes, disease risks, and strong price competition, especially from Turkey & Greece. At the moment, it's difficult to compete in terms of production cost within the Mediterranean.

What brings the most **satisfaction** is keeping operations steady in the face of ongoing challenges.

Key words

RATIONAL

DEMANDING

COST-CONSCIOUS

RESILIENT

EFFICIENCY-DRIVEN

RESULTS-FOCUSED

Tips for beginners

Know the market, the production **costs** and how **efficiency** works.

Attitudinal level

Research, data and analytics

Stance of sustainability:

Vision on market future

They are **concerned** about rising sea temperatures and disease risks, which are likely to stay. Feed costs remain high, so the sector must find new ways to manage these challenges.

Still, **they believe the most stable and efficient farms will continue** and become stronger over time.

Cautious Builders

Risk-averse producers who pursue market differentiation through safe, proven steps.

They see themselves as builders, experienced managers who have developed their farms with time, patience and clear goals. After many years in the sector, they've faced difficult moments and still deal with the daily pressures of running a farm. They believe in aquaculture's strong tradition and the need to evolve gradually, step by step. Today, many are at a key point: grow, integrate or specialise in higher-value products.

Cautious Builders In a nutshell

5 TOTAL
ROLE: CEO 3, Production director 1, Owner 1
Species: SW 2, FW 3
Markets: France 1, Spain 4
Size: Medium 3, Small 2

Consideration drivers

Professional Challenges and Satisfaction

Their main **challenge** is **keeping the farm running smoothly while juggling multiple fronts** administrative, operational and technical. Since profitability is never guaranteed, they stay disciplined to take decisions.

What brings the most **satisfaction** is seeing the real impact of their work, especially when hands-on methods bring strong results.

Key words

STEP-BY-STEP

RESILIENT

COMMITTED

OPORTUNISTIC

SEASONED

STABLE

PRACTICAL

Tips for beginners

Be resilient.
Regulations often add pressure instead of support.

Attitudinal level

Vision on market future

They expect a **few major players to dominate**, with smaller farms shifting to specialised, value-added products. Tech and genetics will boost efficiency.

In the EU, growth relies on optimising existing farms due to strict regulations.
