Photo Use

Photo Use

The photos will be used on our website, social media, in campaigns, press releases, handouts, banners, and brochures. So it is important to have a variety of landscape and portrait images, as well, if possible, to have video footage.

Orientation

It is important to include visual space around the key focus so that we have more possibilities for using the photos - ie, cropping.

A mix of landscape and portrait photos is required.

Location

The location of the shoot will play a big role in determining the background, lighting, and composition of the photos. We would like to include the outside scenery in the photo so that it is recognisable as Norway, Chile, UK etc.. It is preferred that the background is slightly blurred/out of focus.

The locations should be warned beforehand so that they can carry out any cleaning needed.

People

Where it makes sense, we would like 2 people collaborating/interacting. Photos with too many people should be avoided. It is permitted to have people in the background as long as they do not distract from the focus area.

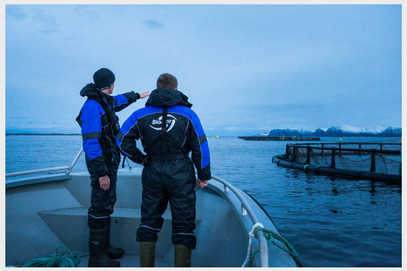

Tips:

- *Where possible the SmartCare Brand Colours should be incorporated subtly such as in the environment, water, clothing, etc.*
- *No overly posed people - they should be looking natural and carrying out regular tasks/activities.*
- *BioMar Logo should be included where possible on the BioMar person or props only. Customers should not be wearing BioMar clothing/logo.*
- *We encourage the customers company logo on their own people.*
- *Mix of photos where people are identifiable and non-identifiable. Faces facing vs not facing camera.*
- *We expect the photos to focus on the everyday workers.*
- *Include a diversity mix - different people, not just 1-2 people. Try different combinations of people.*
- *Everyone on site needs to sign a GDPR prior to the shoot.*

02

Colour Palette

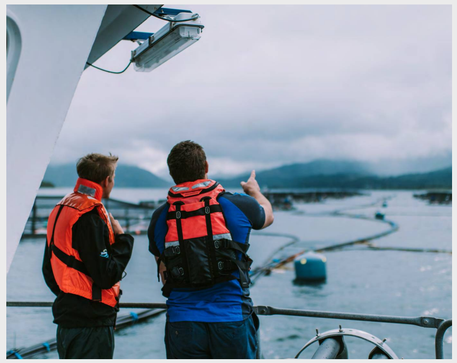

Photo Guidelines

Colour Palette Moodboard

Refer to the mood boards showing soft blue colour tones and the position imagery showing caring, nurturing.

The colours should be used in the background, clothing, water and props.

Avoid RED, Orange, yellow except for life jackets.

03

Wardrobe + Props

Wardrobe

In terms of wardrobe, it's best that each team member's clothes complement both the location and each other. Simple, conservative, and classic clothing styles work well, the clothing should naturally match the location and surroundings. Solid tones and colors, as well as simple designs, are always a good choice.

Avoid ***RED, yellow, pink*** or ***orange*** clothing.
(Orange or yellow is permitted in a life-jacket)

Instead opt for blue, black, grey, white, and natural notes. Shades of blue is preferable.

Tips:

- *Avoid clothes with prints, large lines, stripes, or busy patterns, as these can be distracting.*
- *Avoid makeup products that shimmer or sparkle.*
- *Avoid bright or neon colors.*
- *Avoid clothes with visible branding or decals. EXCEPT BioMar Branded items or the customers brand.* ***It is recommended to wear BioMar clothing.***
- *Logo positioning should be visible. For example the logo on the sleeve when wearing a life jacket.*
- *Stick with neutral and blue tones and classic clothing styles.*

Grooming Tips

- *Jewellery should be kept minimal and simple.*
- *Avoid **RED, yellow, pink** or **orange** nail polish, instead have neutral tones or natural nails.*
- *Avoid over-styled hair as it may not look natural.*

Props

It is recommended to bring your own clean, branded props. This way we can have consistency in the quality of the shots.

- *Buckets*
  - Branded Feed buckets
  - Large neutral plastic buckets for water - white or black looks best. (See left)
- *Jackets*
  - BioMar Branded jackets with right sleeve and left chest logo placement.
- *T-shirts*
  - BioMar branded according to BioMar Brand Guidelines
- *Beakers*
- *Feed scoops*
  - BioMar branded scoops. Or White, black or blue. NOT RED or YELLOW
- *Caps*
  - BioMar Branded. Worn in looks more natural.

04

Photo Style Guide

Purposeful images are a way of translating the brand personality

Colour

Really successful use of colour.

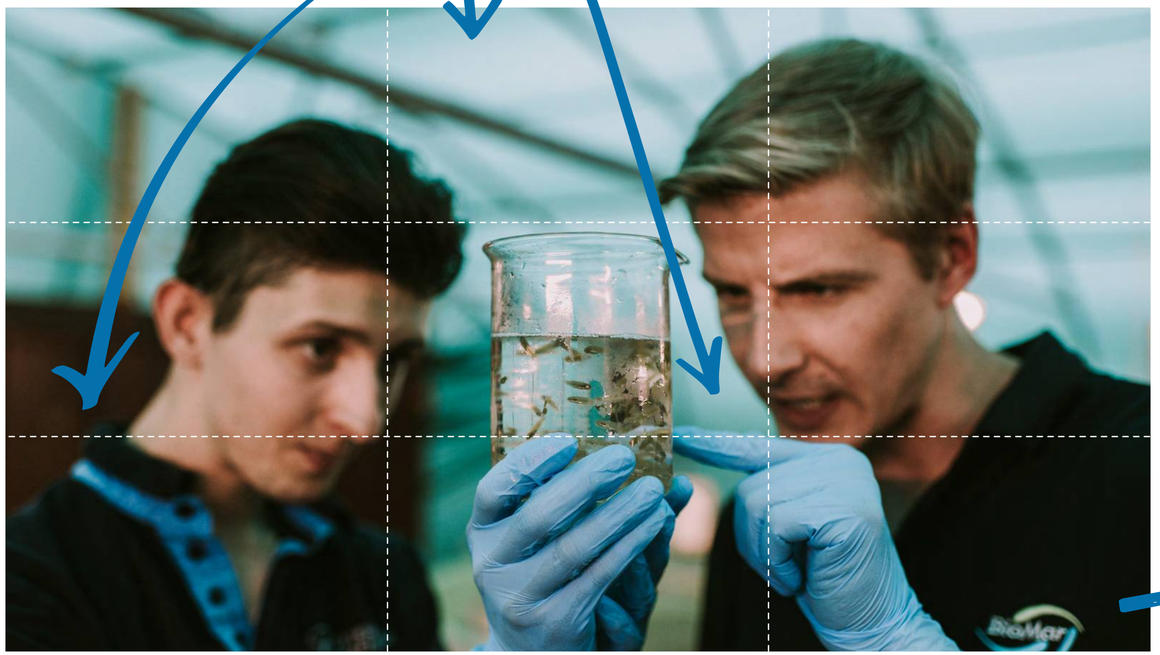

Depth

There is several layers at varying levels of focus. Makes it easy for the eye to know where to look as well as providing context.

- location

- people

-hands + fish

Natural expressions and dynamic between the 2 people.

Can feel they are comfortable.

BioMar Logo

Tactful and subtle use of the BioMar logo. It is not overly obvious, but is noticeable.

Gloves

Brings in the SmartCare colour as well as looking professional, keeps the focus on the fish not the hands.

We have used this image ***a lot*** since it is very versatile and hits on all the traits we are looking for. Collaboration, leadership, knowledge sharing, partnership, R&D, professional, friendly.

Framing

Nice framing, able to gain context from the landscape.

Clever contrast. If the heads where overlapping the green hills we couldnt be able to see them clearly.

Natural Poses

Nice natural poses, candid photo.

Location

Nice location that represents Scotland, however, it would be even better if we could see some net pens in the background.

Props

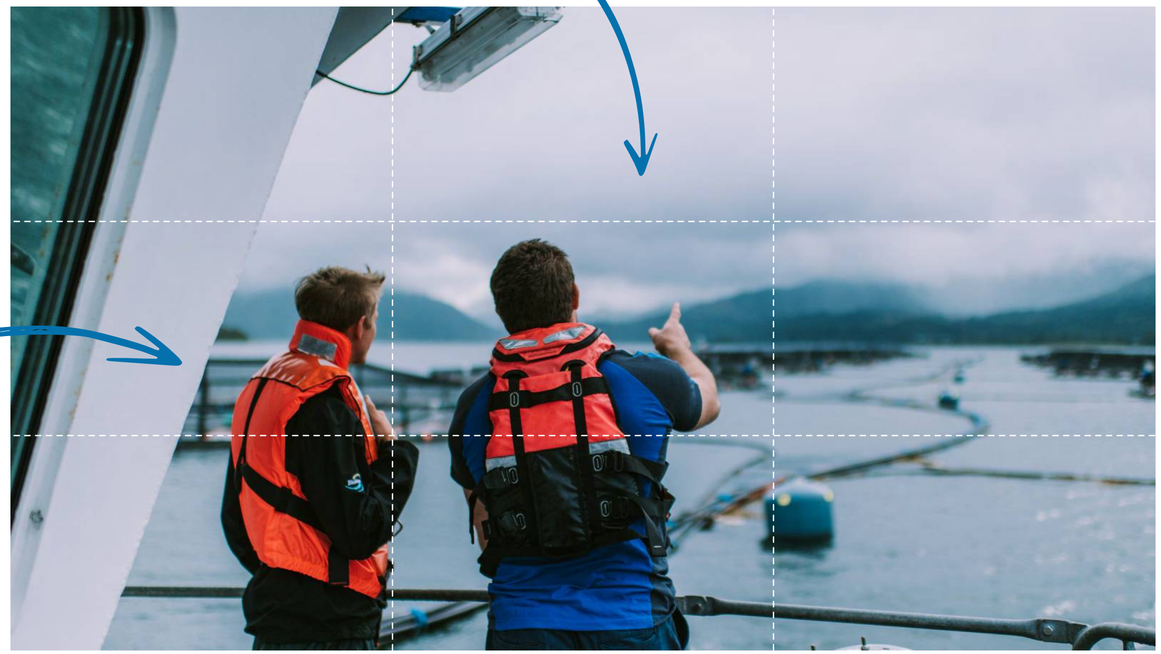

Unfortunate that the life jacket is so damaged and dirty. Would have been better to replace.

Location

Nice location that represents Scotland, it is great that we can see some net pens in the background.

Wardrobe

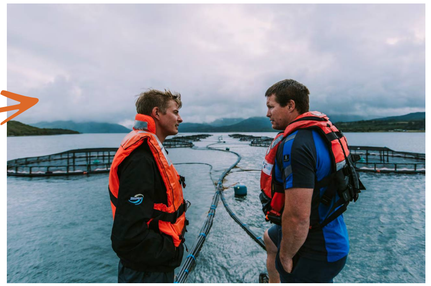

Natural clothing for the environment. The pop of colour in the life-jackets draws the eye.

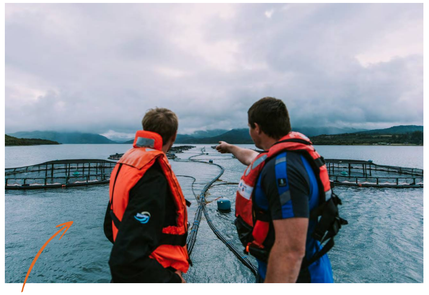

Angle

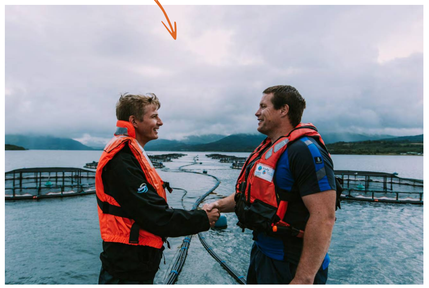

The slight angle works much better then straight on.

This image is not successful as there is too much space in between the people, they are too static and not engaging. The background steals too much attention since there isnt any blur.

These images look too forced/posed. Straight on is harder to use and looks more staged.

Contrast

Beautiful, strong contrast. Clear, sharp focus.

Natural expressions and dynamic between the 2 people.

Can feel they are comfortable. It is more useable when there isnt direct eye contact, but rather they are focusing on what they are doing.

BioMar Logo

Tactful and subtle use of the BioMar logo. It is not overly obvious, but is noticeable.

Location

Nice location that represents Scotland, it is great that we can see some net pens in the background.

Wardrobe

Natural clothing for the environment. The pop of colour in the life-jackets draws the eye.

Bucket

We had to try do a lot of photo-shopping to clean the bucket and change the colour. It is best to bring your own clean, branded props in the correct colours.

We have used this image ***a lot*** since it is very versatile and hits on all the traits we are looking for. Collaboration, leadership, knowledge sharing, partnership, R&D, professional, friendly.

Animal Welfare

Very nice handling of the fish. It is kind, caring and gentle. Soft hands.

Note: He is subtly using his finger to help close the mouth of the fish.

Focus

Beautiful, framing and nice depth.

Angle

This angle and hand placement makes the photo easy to use vertically or horizontally.

Wardrobe - Jewellery

We would use this photo more if there was not any hair-ties or bracelets being worn. It distracts from the image and doesn't look professional.

Background

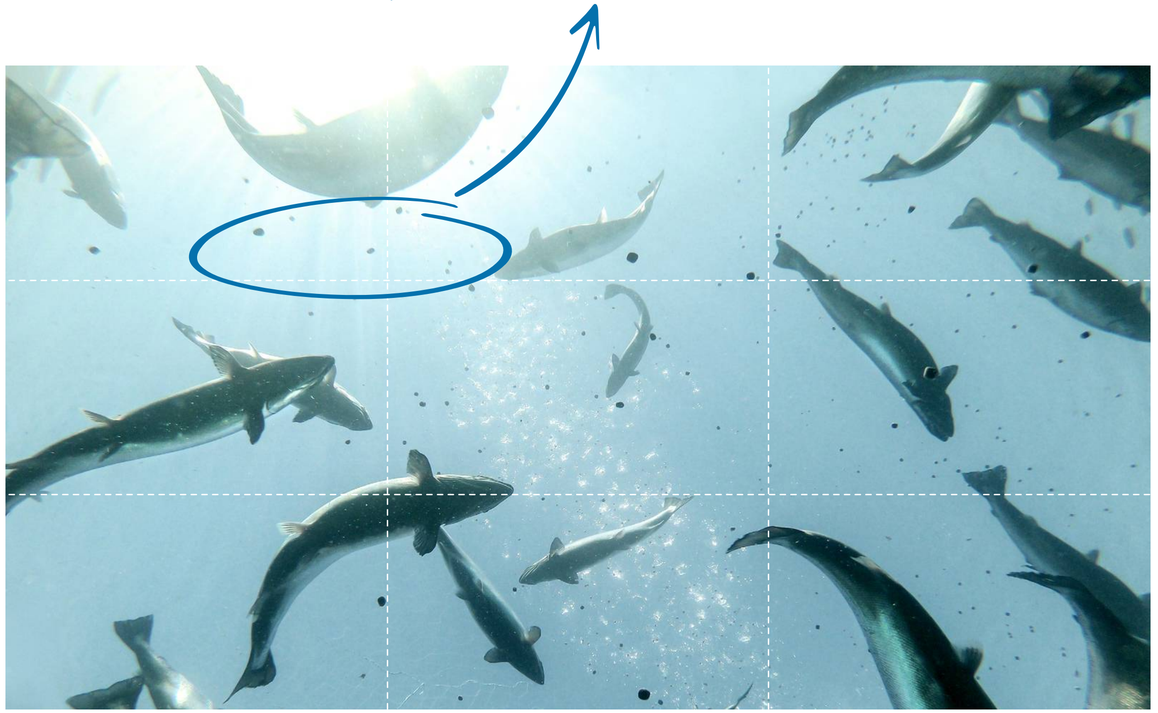

The background should have been cleared so that we didnt get distracted by the strong red colour.

Animal Welfare

Very nice handling of the fish. It is kind, caring and gentle. Soft hands.

Feed

Including the feed is a great idea. It shows our product in action.

Water quality

Take close note of the water quality - too many particles in the water and it will look dirty. Be strategic in the time of year you take the photos.

Lights

It can be beneficial to use artifical lights underwater to be able to get better quality shots.

Angle

This angle is great for a light and inspiring look. We are able to see the sun, the fish and the feed. It also has a nice balance of space and fish - it doesnt look overcrowded.

Clarity

It is important to get good clarity. Sharp images underwater can be difficult but are required since they are some of our most used images - and are often zoomed in and cropped.

Animal Welfare

Animal Welfare

It is vital to be mindful and respectful of the way we handle fish and shrimp. Photos that show them in a ***caring*** and ***respectful*** manner is more desirable over showing them cut up, damaged or broken.

It is most important to show careful and delicate handling of the fish and shrimp.

Avoid showing fish and shrimp in a hunting or trophy like manner. *(See below)*

Note: *It is difficult for them to appear alive and well in photos. It helps to incorporate water movement, this could be from ripples or water droplets.*
